

# Flow-Liner®

“Keeps the Brewery Flowing”

With A Process Pipe Lining Technology Solution

## History

Anheuser-Busch, based in St. Louis, is the leading American brewer, holding a 47.6 percent share of U.S. beer sales to retailers. The company brews the world’s largest selling beers, Budweiser and Bud Light, and distributes these and many other popular brands through a network of more than 600 independent wholesalers. Anheuser-Busch operates 12 breweries across the United States.

## Problem/Issue

The brewery located in Williamsburg, Virginia contacted a Flow-Liner Installer via their contractor, R.S. Harritan & Company, Inc., regarding trenchless rehabilitation options for their process waste piping system. The process waste piping system consisted of 6” and 8” stainless steel and 8” and 10” clay tile pipes. Due to the brewery’s operations, the lines could only be accessed during scheduled shut down periods.

## Solution

Using Flow-Liner® technology, a Flow-Liner Certified Installer used the Flow-Liner Process Pipe Lining System to line the process pipes.

## Results

The process waste piping system was successfully lined without disruption to the operations. The Anheuser-Busch representative was very pleased with the results and commented: ***“I’d like to pass along my thanks for a job well done. You and your crew are to be commended for your professionalism and adaptability in completing the Williamsburg project in the required timeframe.”***
